

# Macro Processors

## Conditional Expansion

### Conditional Macro Expansion

- Most macro processors can modify the sequence of statements generated for a macro expansion depending on the arguments in invocation
- **Conditional macro expansion statements**
  - *IF-ELSE-ENDIF*
  - *WHILE-ENDW*
- Macro-time variables
  - any symbol that begins with the character & and that is not a macro parameter
  - macro-time variables are initialized to 0
  - macro-time variables can be changed with their values using SET

**&EORCK**     **SET**     **1**

25	RDBUFF	MACRO	&INDEV,&BUFADR,&RECLTH,&EOR,&MAXLTH

90  $EXIT    STX    &RECLTH     SAVE RECORD LENGTH
95          MEND

```

- Testing of Boolean expressions in IF statement occurs at the time of macro expansion
- Same applies to the assignment of values to macro-time variables

25	RDBUFF	MACRO	&INDEV,&BUFADR,&RECLTH,&EOR,&MAXLTH

95		MEND			

## Conditional Macro Expansion (Cont.)

- Macro-time looping statement
  - WHILE-ENDW
- Macro processor function
  - %NITEMS: THE NUMBER OF MEMBERS IN AN ARGUMENT LIST

```

25 rdbuf    macro &indev, &bufadr, &reclth, &eor
27 &eorct    set    %nitems(&eor)
30          clear   x
35          clear   a
45          +ldt    #4096
50 $loop     td      =x'&indev'
55          jeq     $loop
60          rd      =x'&indev'
63 &ctr      set     1
64          while   (&ctr le &eorct)
65          comp    =x'0000&eor[&ctr]
70          jeq     $exit
71 &ctr      set     &ctr +1
73          endw
75          stch    &bufadr, x
80          tixr    t
85          jlt     $loop
90 $exit     stx     &reclth
100         mnd

```

RDBUFF F2, BUF,  
LENGTH, (00, 03, 04)

### ANSI C Macro Language

```
#define NULL 0
```

- Macros with parameters

```
#define ABSDIF(X, Y) ((X) > (Y) ? (X) - (Y) : (Y) - (X))
```

```
ABSDIF(I + 1, J - 5)
```

```
#define ABSDIF(X, Y) X > Y ? X - Y : Y - X
```

```
ABSDIF(3 + 1, 10 - 8)
```

- Parameter substitution is not performed within quoted strings

```
#define DISPLAY(EXPR)      printf("EXPR = %d\n", EXPR)
```

```
DISPLAY(I * J + 1)
```

### ANSI C Macro Language (contd.)

```
#define DISPLAY(EXPR)    printf(#EXPR " = %d\n", EXPR)
```

- Macro invocation within macro invocation

```
DISPLAY(ABSDIF(3,8))
```

After a macro is expanded, it is scanned again for macro definitions / invocations

- Conditional statements

```
#ifndef    BUFF_SIZE
#define    BUFF_SIZE    1024
#endif
```

```
