5. 1)  $(\lambda g. g 5) (\lambda x. x + 3)$

Using CBN:-

$$(\lambda g. g 5) (\lambda x. x + 3)$$

$$\equiv (\lambda x. x + 3) 5$$

$$\equiv 5 + 3 = 8 \quad \underline{\text{Ans}}$$

Using CBV:-

$$(\lambda g. g 5) (\lambda x. x + 3)$$

$$\equiv (\lambda x. x + 3) 5$$

$$\equiv 5 + 3 = 8 \quad \underline{\text{Ans}}$$

Here, the sequence of CBN and CBV are both same as  $(\lambda x. x + 3)$  can't be evaluated further, in function application

2)  $(\lambda x. x x x) (\lambda x. x x x)$

Using CBN:-

$$(\lambda x. x x x) (\lambda x. x x x)$$

$$\equiv (\lambda x. x x x) (\lambda x. x x x) (\lambda x. x x x) \equiv \dots$$

It leads to infinite computation.

Ans

⊢ Using CBV: -

$$\Rightarrow (\lambda x. xxx) (\lambda x. xxx)$$

$$\stackrel{=}{=} (\lambda x. xxx) (\lambda x. xxx) (\lambda x. xxx) \stackrel{=}{=} \dots$$

It leads to infinite computation. Ans
