Documents

- Last lecture: Simple Boolean retrieval system
- Our assumptions were:
 - We know what a document is.
 - We can "machine-read" each document.
- This can be complex in reality.

ntroduction to Information Retrieval

Format/Language: Complications

- A single index usually contains terms of several languages.
 - Sometimes a document or its components contain multiple languages/formats.
 - French email with Spanish pdf attachment
- What is the document unit for indexing?
- A file?
- An email?
- An email with 5 attachments?
- A group of files (ppt or latex in HTML)?
- Upshot: Answering the question "what is a document?" is not trivial and requires some design decisions.
- Also: XML

ntroduction to Information Retrieva

Normalization: Other languages

- Normalization and language detection interact.
- PETER WILL NICHT MIT. → MIT = mit
- He got his PhD from MIT. → MIT ≠ mit

ntroduction to Information Retrieval

Parsing a document

- We need to deal with format and language of each document.
- What format is it in? pdf, word, excel, html etc.
- What language is it in?
- What character set is in use?
- Each of these is a classification problem, which we will study later in this course.
- Alternative: use heuristics

Introduction to Information Retrieva

Normalization

- Need to "normalize" terms in indexed text as well as query terms into the same form.
- Example: We want to match U.S.A. and USA
- We most commonly implicitly define equivalence classes of terms
- Alternatively: do asymmetric expansion
 - window → window, windows
 - windows → Windows, windows
 - Windows (no expansion)
- More powerful, but less efficient

Introduction to Information Retrievo

Recall: Inverted index construction

Input:

Friends, Romans, countrymen. So let it be with Caesar . .

Output:

friend roman countryman so . .

- Each token is a candidate for a postings entry.
- What are valid tokens to emit?

6

Introduction to Information Retrieval

Exercises

In June, the dog likes to chase the cat in the barn. – How many word tokens?

-Tokenize: Mr. O'Neill thinks that the boys' stories about Chile's capital aren't amusing.

ntroduction to Information Retrieval

Tokenization problems: One word or two? (or several)

- Hewlett-Packard
- State-of-the-art
- co-education
- the hold-him-back-and-drag-him-away maneuver
- data base
- San Francisco
- Los Angeles-based company
- cheap San Francisco-Los Angeles fares
- York University vs. New York University

Introduction to Information Retrieval

Numbers

- **3/20/91**
- **20/3/91**
- Mar 20, 1991
- B-52
- **1**00.2.86.144
- (800) 234-2333
- **800.234.2333**
- Older IR systems may not index numbers . . .
- . . . but generally it's a useful feature.

Introduction to Information Retrievo

Chinese: No whitespace

莎拉波娃现在居住在美国东南部的佛罗里达。今年4月9日,莎拉波娃在美国第一大城市纽约度过了18岁生日。生日派对上,莎拉波娃露出了甜美的微笑。

ntroduction to Information Retrieva

Ambiguous segmentation in Chinese

The two characters can be treated as one word meaning 'monk' or as a sequence of two words meaning 'and' and 'still'.

Introduction to Information Retrieval

Other cases of "no whitespace"

- Compounds in Dutch, German, Swedish
- ${\color{red}\bullet} \;\; \mathsf{Computerlinguistik} \to \mathsf{Computer} + \mathsf{Linguistik}$
- Lebensversicherungsgesellschaftsangestellter
- ${\color{red}\bullet} \rightarrow {\rm leben} + {\rm versicherung} + {\rm gesellschaft} + {\rm angestellter}$
- Inuit: tusaatsiarunnanngittualuujunga (I can't hear very well.)
- Many other languages with segmentation difficulties: Finnish, Urdu, . . .

Japanese

ノーベル平和賞を受賞したワンガリ・マータイさんが名誉会長を務めるMOTTAINAIキャンペーンの一環として、毎日新聞社とマガジンハウスは「私の、もったいない」を募集します。皆様が日ごろもったいない」と感じて実践していることや、それにまつわるエピソードを800字以内の文でにまどめ、簡単な写真、イラスト、図などを発えて10月20日までにお送りください。大賞受賞者には、50万円和当の旅行券とエコ製品2点の副賞が贈られます。

4 different "alphabets": Chinese characters, hiragana syllabary for inflectional endings and functional words, katakana syllabary for transcription of foreign words and other uses, and latin. No spaces (as in Chinese). End user can express query entirely in hiragana!

Introduction to Information Retrieval

Arabic script

ك ِتاب ٌ ⇔ كِتابٌ un bātik /kitābun/ *'a book'*

Introduction to Information Retrieval

Arabic script: Bidirectionality

استقلت الجزائر في سنة 1962 بعد 132 عاما من الاحتلال الفرنسي. $\leftrightarrow \rightarrow \leftrightarrow$ START

'Algeria achieved its independence in 1962 after 132 years of French occupation.'

Introduction to Information Retrievo

Accents and diacritics

- Accents: résumé vs. resume (simple omission of accent)
- Umlauts: Universität vs. Universitaet (substitution with special letter sequence "ae")
- Most important criterion: How are users likely to write their queries for these words?
- Even in languages that standardly have accents, users often do not type them. (Polish?)

Introduction to Information Retrieva

Case folding

- Reduce all letters to lower case
- Possible exceptions: capitalized words in mid-sentence
- MIT vs. mit
- Fed vs. fed
- It's often best to lowercase everything since users will use lowercase regardless of correct capitalization.

ntroduction to Information Retrieva

Stop words

- stop words = extremely common words which would appear to be of little value in helping select documents matching a user need
- Examples: a, an, and, are, as, at, be, by, for, from, has, he, in, is, it, its, of, on, that, the, to, was, were, will, with
- Stop word elimination used to be standard in older IR systems.
- But you need stop words for phrase queries, e.g. "King of Denmark"
- Most web search engines index stop words.

17

18

Lemmatization

- Reduce inflectional/variant forms to base form
- Example: am, are, is → be
- Example: car, cars, car's, cars' → car
- Example: the boy's cars are different colors → the boy car be different color
- Lemmatization implies doing "proper" reduction to dictionary headword form (the lemma).
- Inflectional morphology (cutting → cut) vs. derivational morphology ($destruction \rightarrow destroy$)

Introduction to Information Retrieva

Stemming

- Definition of stemming: Crude heuristic process that chops off the ends of words in the hope of achieving what "principled" lemmatization attempts to do with a lot of linguistic knowledge.
- Language dependent
- Often inflectional and derivational
- Example for derivational: automate, automatic, automation all reduce to automat

Introduction to Information Retrieval

Porter algorithm

- Most common algorithm for stemming English
- Results suggest that it is at least as good as other stemming
- Conventions + 5 phases of reductions
- Phases are applied sequentially
- Each phase consists of a set of commands.
 - Sample command: Delete final ement if what remains is longer than 1 character
 - replacement → replac
 - cement → cement
- Sample convention: Of the rules in a compound command, select the one that applies to the longest suffix.

Porter stemmer: A few rules

Rule	Example
$SSES \rightarrow SS$	caresses → caress
$IES \rightarrow I$	ponies \rightarrow poni
$SS \rightarrow SS$	caress → caress
$S \rightarrow$	$cats \rightarrow cat$

Three stemmers: A comparison

Sample text:

Such an analysis can reveal features that are not easil visible from the variations in the individual genes and can lead to a picture of expression that is more biologically transparent and accessible to interpretation

Porter stemmer: such an analysi can reveal featur that ar not easili visibl from the variat in the individu gene and can lead to pictur of express that is more biolog transpar and access to interpret

Lovins stemmer: such an analys can reve featur that ar not eas vis from th vari in th individu gen and can lead to a pictur of expres that is mor biolog transpar and acces to interpres

Paice stemmer: such an analys can rev feat that are not easy vis from the vary in the individ gen and can lead to a pict of express that is mor biolog transp and access to interpret

Does stemming improve effectiveness?

- In general, stemming increases effectiveness for some queries, and decreases effectiveness for others.
- Queries where stemming is likely to help: [tartan sweaters], [sightseeing tour san francisco] (equivalence classes: {sweater,sweaters}, {tour,tours})
- Porter Stemmer equivalence class oper contains all of operate operating operates operation operative operatives operational.
- Queries where stemming hurts: [operational AND research], [operating AND system], [operative AND dentistry]

Exercise: What does Google do?

- Stop words
- Normalization
- Tokenization
- Lowercasing
- Stemming
- Non-latin alphabets
- Umlauts
- Compounds
- Numbers
